

OVERVIEW OF PPG, DATA ANALYTICS, INFRASTRUCTURE, SAP

WHO IS PPG???

- Global team of innovators, achievers and partners in **70+ countries**
- Strong customer trust and high sales
- Consistently ranked on **FORTUNE 500**
- “**Colourful Community**” – committed to helping local communities
- Industry: **Paints, coatings & specialty materials**
- 3 coating segments: **Global Architectural, Performance, Industrial**
- Workforce includes locals + expats; strong **gender equality**

DATA ANALYTICS

Support data-driven decision making using MIS and other information systems. Identify patterns/trends → make accurate predictions → drive growth

EXAMPLES

- **Complexity Analysis Tool** (Supply Chain Control Tower)
- **Vessel Database** (better shipping & stock visibility)

KEY SKILLS

- Programming languages
- ELT processes
- Database design
- Data/file types
- Data visualisation
- DevOps practices & version control

PPG DIGITAL IT – CAREER & LEARNING

Engage in real global projects

Mentorship from industry professionals

Interns are considered for full-time roles

Work with multiple business functions

Summarized PPG Process Flow

GLOBAL INFRASTRUCTURE

Goals: PLAN → BUILD → RUN

- **Plan** – bridge communication between business & IT
- **Build** – deliver infrastructure to meet business needs
- **Run** – ensure high-availability and strong end-user experience

Key Points

- Multi-cloud architecture
- Region-specific hubs: **PPG Performance Hub**
- Skills: cloud architecture, cloud engineering, networking (LAN/WAN), security, servers & virtualisation
- Monitoring tools include **Cisco**

What is SAP??

- **System Analyse Programmentwicklung** (System Analysis Program Development)
- Modular system → divided into many business modules

SAP

MAIN AREAS

Reporting – Business Warehouse (BW), SAP Analytics Cloud (SAC)

Functional – contains all business modules

Technical – backend tools for development, customisation, system architecture

ERP (ENTERPRISE RESOURCE PLANNING)

- Software that connects **all core business processes** (Finance, HR, Manufacturing, etc.)
- Everyone uses **one shared database** → no separate systems → seamless integration across business areas

The poster provides a structured overview of PPG and its major digital functions, helping me better understand how technology supports operations in a global organisation. I learned that PPG is not only a leader in the paints and coatings industry but also places strong emphasis on innovation, diversity, and community involvement. Knowing that the company operates in more than 70 countries and is consistently ranked in the Fortune 500 highlights the scale and impact of its digital systems.

The Global Infrastructure area introduced me to the “Plan → Build → Run” framework, which clearly outlines how IT teams support business functions. I realised how essential infrastructure is in ensuring system reliability, security, and high availability for users worldwide. The mention of cloud engineering, networking, and monitoring tools like Cisco gave me a clearer picture of the technical responsibilities involved.

The section on Data Analytics was particularly insightful. It explains how data-driven tools, such as the Complexity Analysis Tool and the Vessel Database, are used to identify trends and improve supply chain visibility. This helped me understand that data analytics is not just about analysing information, but about enabling accurate decisions that contribute to business growth. The skills listed—programming, database design, data visualisation, and DevOps—also show how diverse and technical the field is.

The ERP and SAP sections further deepened my understanding of integrated business systems. ERP's concept of using one shared database helps eliminate silos and ensures smooth communication across finance, HR, manufacturing, and other departments. Meanwhile, SAP's modular structure—divided into functional and technical areas—shows how flexible and comprehensive the system is in supporting different business needs.

Overall, the poster helped me appreciate how interconnected these digital fields are and how they collectively contribute to PPG's global operations. It also highlighted valuable learning opportunities within PPG Digital IT, including mentorship and involvement in real projects. This reflection strengthened my understanding of how important digital skills are in modern organisations, and how roles in analytics, infrastructure, and ERP systems work together to create efficient and data-driven environments.
